Article No.: 000050085

Product: Analytics

Announcement Details:

Blackboard is pleased to announce the availability of Hotfix 156 for Analytics for Learn to address an issue with incorrect identifying of primary (not primary) advisors in Advisor at a Glance SSRS report. This hotfix applies to Analytics for Learn versions 4.3.2 through 4.3.3.

ISSUE RESOLVED

The Advisor at a Glance report is not correctly showing whether advisor is or is not a primary advisor for a student. Original logic adds Primary Advisor indicator “X” for every student regardless records in SQL table (whether advisor is or is not a primary advisor for this student). In SQL table are records about students and their advisors, advisor could be primary/not primary for the student and this logic could be implemented to the Advisor at a Glance report. Logic in this report was changed so that Primary Advisor indicator in Advisor at a Glance report should be identified correctly.

HOTFIX PROCESS

1. Execute the script in the SQL hotfix file in SQL Server Management Studio on the Analytics for Learn database (iBBLA).
2. Download the compressed RAR file containing the Advisor at a Glance advising report .RDL files. (There is an individual .RDL file for each language supported in Analytics for Learn.)
3. Follow the deployment instructions to re-deploy the reports .RDL files using Business Intelligence Development Studio (BIDS) to the SSRS server instance. After applying the hotfix, confirm that the reports match the custom style definition.

HOTFIX VERIFICATION

Once the hotfix is applied the Primary Advisor indicator in Advisor at a Glance report should be identified correctly.

REQUIREMENTS

- Appropriate knowledge of SQL Server to apply the hotfix script
- Familiarity with the custom styling functionality. (Custom-Styling documentation provided with the version 4.3.2. release.)
- This hotfix does not have any prerequisites.

AVAILABILITY

The hotfix was made available on April 11, 2017.

Please reach out to Blackboard Support with any questions or issues regarding this hotfix or any prerequisites.
